

SUYASH TIWARI

DevSecOps Engineer | Cloud Security | AI Security

📍 Pune, India

[GitHub](#) | [LinkedIn](#) | [Portfolio](#) | [Email](#)

SUMMARY

DevSecOps and AI Engineer focused on cloud security, digital forensics, and machine learning. Experienced in building secure infrastructure, automating deployments, and creating AI tools to detect threats in real time. Passionate about using AI to solve practical security problems and building reliable backend systems.

TECHNICAL SKILLS

Languages	Python, C/C++, JS/TS, SQL, Bash, R
AI/ML	TensorFlow, scikit-learn, OpenCV, ONNX, Vision Transformers, NLP
Cloud & DevOps	AWS EKS, Kubernetes, Docker, Linux, CI/CD
Backend:	FastAPI, Flask, MySQL, PostgreSQL, Firebase
Tools:	Wazuh (SIEM), Trivy, Bandit, Semgrep, Git, Nmap, Wireshark, Metasploit

EXPERIENCE

DevSecOps InternSep 2025 – Present

Cloudaeon Pvt Ltd

- Upgraded and optimized Wazuh SIEM infrastructure by implementing custom detection rules, dashboards, and automated severity-based alerting to improve threat visibility and incident response.
- Deployed containerized MySQL applications, simulated attack scenarios, and analyzed security logs aligned with MITRE ATT&CK techniques to validate detection capabilities.
- Migrated security monitoring from node-level to pod-level in AWS EKS and integrated Trivy for container vulnerability scanning to strengthen cloud-native security posture.

PROJECTS

DeepGuard AI Forensics & Threat EngineView

- Built a privacy-focused browser extension with a FastAPI backend to detect deepfakes in real time using a Vision Transformer model. Added forensic analysis features like Grad-CAM and ELA, and generated secure, tamper-proof reports using SHA-256.

DevSecOps Pipeline & Risk EngineView

- Architected a DevSecOps pipeline using GitHub Actions integrating SAST tools (Bandit, Semgrep) and dependency scanning. Developed a Python-based risk scoring engine that blocks deployments when high-severity vulnerabilities are detected.

Hybrid Post-Quantum File EncryptionView

- Built a hybrid encryption CLI combining AES-256-GCM with a post-quantum key exchange design inspired by Kyber. Implemented Argon2 password-based key derivation and benchmarked cryptographic performance.

EDUCATION

Vishwakarma University
BTech in Computer Science Engineering
2022–2026

GPA: 7.1/10
